

In the Specification

Kindly amend paragraphs [0028] – [0029] to read as presented on the next page.

Q2 [0028] The device comprises a frame holding a hand rail, two large rear wheels which allow the user to propel the device by hand, two small front wheels which allow the user to steer the device by shifting his or her weight in the desired direction, a vertical support rising from the rear end of the frame which holds a vertical support bar, a body halter for allowing support of the user's body weight, and a winch mechanism connected to the halter by connecting ropes or cables allowing the user to be hoisted and supported to any full or partial weight-bearing degree. An overhead swivel allows the user to turn in any direction while within the device, thus allowing entrance and exit facing either the front or rear of the device. The device comprises a fold-away seat which allows the user to rest and to propel the device by hand power applied to the rear wheels.

**BRIEF DESCRIPTION OF THE DRAWING SEVERAL VIEWS OF THE
DRAWINGS**

[0029] Fig. 1 is a side elevational view of the device.
